

## Quick Reference Sheet

*Our Quick Reference Sheet (QRS) presents the details of each bullet in a convenient format. Keep in mind these numbers are for reference and do not reflect exact numbers for every lot.*

### Description Legend

**FB:** Flat Base  
**High BC FB:** High BC Flat Base  
**BR Column/WEB FB/Euwin FB:** Bench Rest Flat Base  
**BT:** Boat Tail  
**Long Range BT/Juggernaut:** Long Range Boat Tail  
**VLD:** Very Low Drag  
**Hybrid:** Combination Secant and Tangent Ogive  
**Classic Hunter:** Short Nose Hybrid  
**Elite Hunter:** Long Nose Hybrid  
**OTM:** Open Tip Match

### Bullet Dimension Reference

**Bullet Diameter:** This is the bullet caliber.  
**OAL:** Overall Length  
**Boat Tail:** Length of the boat tail, excluding the heal.  
**Nose Length:** From the front of bearing surface to the bullet tip.  
**Base To Ogive:** From the bullet base to the point on the nose which contacts the riflings at the bore diameter.  
**Bearing Surface:** Length of the full diameter portion of the bullet.

### Performance Metrics

**SD:** Sectional Density, an indicator of penetration.  
**G1 BC:** The Ballistic Coefficient referenced to the G1 standard. Use this BC for flat base bullets.  
**G7 BC:** The Ballistic Coefficient referenced to the G7 standard. Use this BC for boat tail bullets.  
**G7 Form Factor:** The drag of the bullet compared to the G7 standard. Lower form factor means lower drag. Form factors close to 1.0 are average. Bullets with form factors below 1.0 will have high BC's for their weight, and will perform better at long range.  
**Minimum Twist:** This is the minimum twist required for good accuracy.  
**Optimal Twist:** This is the twist that will stabilize the bullet to a level which achieves its full performance (BC) potential.
