### Ball Powder

BALL POWDER, a superior smokeless propellant, is the result of an exclusive Winchester-Western manufacturing process which makes it entirely new in appearance and performance.

Thoroughly proven through long use in factory loaded Winchester and Western ammunition, BALL POWDER is progressive burning and gives highly uniform ballistics under standard loading conditions. Velocities are exceptionally uniform with easy ignition and fast barrel times. BALL POWDER is very clean burning.

The smooth rounded grains, carefully graphited, flow smoothly and easily through powder measures, resulting in highly precise charges, round after round.

All primers packed 100 per box.

It must be dependable under all weather conditions, and not lose its effectiveness in storage.

The new Winchester-Western priming has proved invulnerable to this deteriorating effect by withstanding continuous storage at temperatures from minus 40°F. up to 115°F. at a relative humidity of 85% for more than a year at a time. Ignition of the powder after these tests is lightning fast and uniform.

All the ingredients of Winchester-Western priming are non-corrosive—nothing present to cause rusting of the gun barrel.
